EDUCATION

New Jersey Institute of Technology

Newark, NJ

Bachelor of Science in Computer Science

Expected Graduation: May 2027

- **Relevant Coursework:** Data Structures and Algorithms, Foundations of Computer Science, Programming Language Concepts, Intensive Programming in Linux, Principles of Operating Systems, Cybersecurity, Networking

Cumberland County Technical Education Center

Vineland, NJ

Technical Certificate in Information Technology

Sep. 2019 – May 2023

TECHNICAL SKILLS

Languages: Java, Python, C, C++, SQL, JavaScript, HTML, CSS

Technologies: React, Bootstrap, MySQL, VSCode, Git/Github, Scikit-learn, Jupyter Notebook, Pandas, NumPy, Streamlit, Plotly, Matplotlib, ServiceNow, MS Office Suite

EXPERIENCE

Nuclear Information Technology Intern

May 2025 – August 2025

PSEG

Salem, NJ

- Automated enterprise asset tracking processes by developing DBMS-driven reporting system, generating weekly analytics on 500+ hardware assets and improving operational visibility for leadership.
- Delivered innovative 3D scanning solution enabling nuclear maintenance supervisors to virtually view the plant through the scans on their device, reducing physical inspection time by 30% while maintaining safety compliance.
- Resolved critical month-long software deployment roadblock within 72 hours by engineering troubleshooting protocols and technical documentation, improving team productivity and knowledge sharing.
- Established nuclear plant's first technical support desk, providing real-time ServiceNow-based support for 200+ employees and collaborating across departments on enterprise IT operations.

Information Services and Technology Service Desk Attendant

Sep. 2024 – Present

New Jersey Institute of Technology

Newark, NJ

- Lead liaison between IST leadership and 8 student employees, managing knowledge base documentation integration projects and ensuring seamless information flow across teams.
- Resolve 60+ technical tickets monthly with high first-time resolution rate, demonstrating strong troubleshooting skills and providing comprehensive support for complex technical issues.
- Provide enterprise-level technical support utilizing cloud platforms including Microsoft Azure, Office 365, and hybrid file systems, serving as primary point of contact for NJIT's computing infrastructure.

PROJECTS

Nuclear vs Renewable Energy Dashboard | *Python, Streamlit, Plotly, Pandas*

GitHub

- Built interactive data visualization platform analyzing global energy trends across 314 countries from 1990-2025 using 23,000+ rows of real-world data from Our World in Data.
- Developed comparative analytics dashboard with real-time filtering showing nuclear vs renewable electricity generation, carbon intensity, capacity factors, and cost metrics.
- Created professional web interface with custom CSS styling and 5+ interactive Plotly visualizations to demonstrate tradeoffs in clean energy transition.
- Applied insights from summer IT internship at nuclear power plant to explore data-driven solutions for energy policy decisions.

Credit Card Fraud Detection | *Python, Scikit-learn, Pandas, Matplotlib*

GitHub

- Built machine learning models to detect fraudulent transactions in dataset of 284,807 credit card transactions with 0.17% fraud rate.
- Achieved 96.3% ROC-AUC score and 81.6% fraud detection rate using Random Forest classifier while maintaining 94% precision to minimize false positives.
- Developed end-to-end ML pipeline including data preprocessing, model training, evaluation, and visualization of results.
- Demonstrated practical application of AI in fintech for solving real-world imbalanced classification problems.
